

Are we there yet? Monitoring progress towards the prevention of violence against women in Australia

Anna Trembath, Emma Partridge, Melalie Collie, Sarah Kearney

SVRI Forum, Cape Town, October 2019

**Our
WATCH**
End violence against
Women And Their Children

Our Watch: a national organisation for the primary prevention of violence against women

- Non-government organisation, but with government members
- Our specialist focus is **primary prevention**
- Our areas of work:
 - o evidence development
 - o policy advice to governments
 - o support and tools for practitioners and communities
 - o social marketing campaigns and media work
- *Change the story*: world's first evidence-based framework for primary prevention. Identifies the underlying **gendered drivers** of violence against women, and **actions** to address these

GENDERED DRIVERS

of violence against women:

CONDONING
of violence
against women

MEN'S CONTROL
of decision-
making and limits
to women's
independence

STEREOTYPED
constructions of
masculinity and
femininity

DISRESPECT
towards women and
male peer relations
that emphasise
aggression

Gender inequality sets the **NECESSARY SOCIAL CONTEXT**

Violence against women
IS PREVENTABLE
if we all work together

ACTIONS

that will prevent violence against women:

CHALLENGE
condoning of
violence against
women

PROMOTE
women's
independence
& decision-making

CHALLENGE
gender
stereotypes
and roles

STRENGTHEN
positive, equal
and respectful
relationships

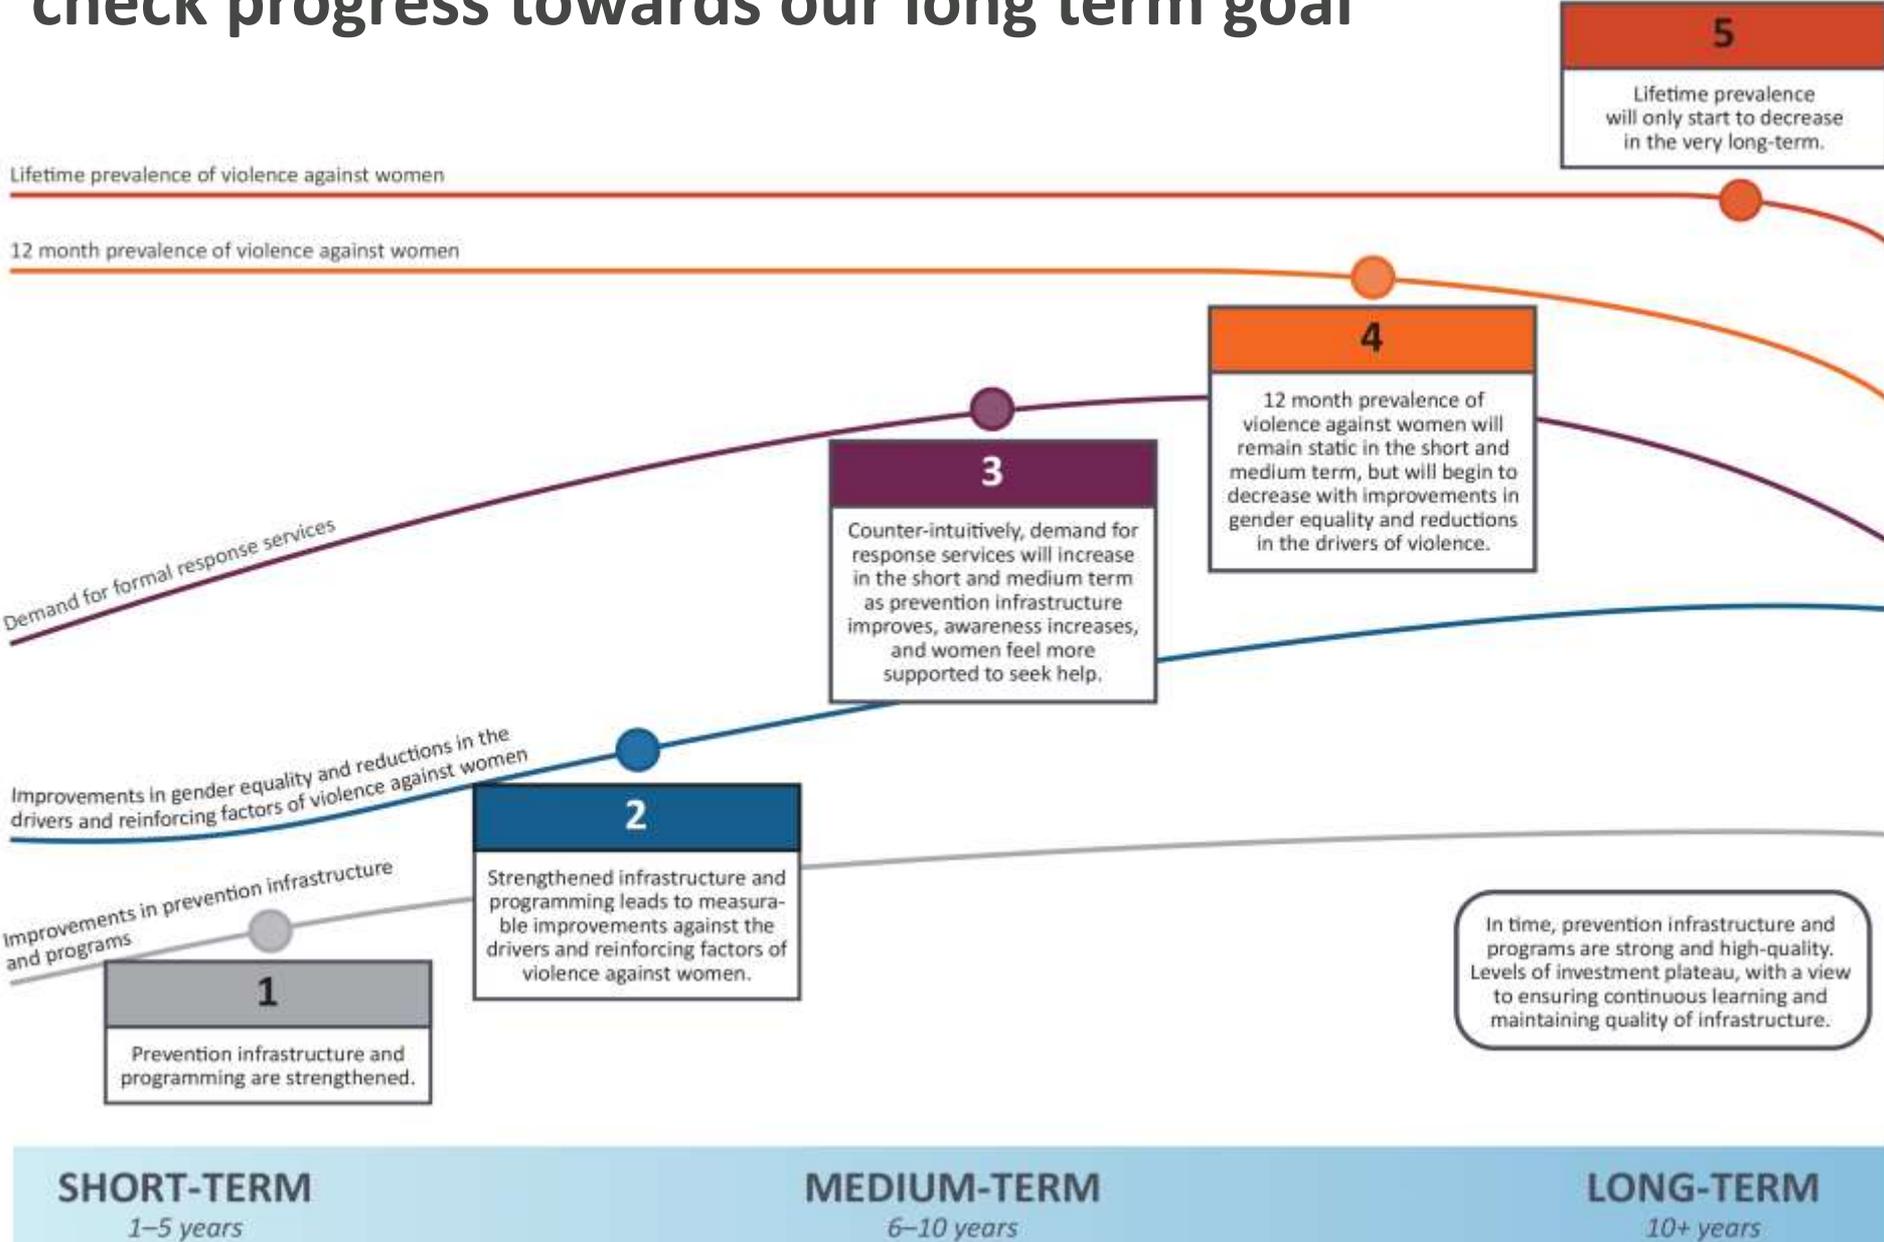

Promote and normalise GENDER EQUALITY in public and private life

What is *Progress in prevention*?

- *Counting on change* – framework for monitoring and evaluating progress on prevention actions in *Change the story*
- *Progress in prevention*: first report tracking national level change
- Monitoring change against measures and indicators for:
 - The gendered drivers of violence against women
 - Intersecting and reinforcing factors
 - Prevalence
- Begins assessment of how primary prevention infrastructure is developing (incl. policy, leadership, programming, workforce)
- Demonstrates:
 - *how* national monitoring and reporting can be done,
 - *what measures and data* can be used, and
 - *what such a report it looks like*
- Intended as the first in a series

Tracking short and medium term measures as a way to check progress towards our long term goal

ULTIMATE GOAL ▶
 Australian women and their children live free from violence in safe communities

LONGER-TERM MEASURES ▶
 What will be the outcomes in the longer-term?

MEDIUM-TERM MEASURES ▶
 What changes should we aim for and measure in the medium-term?

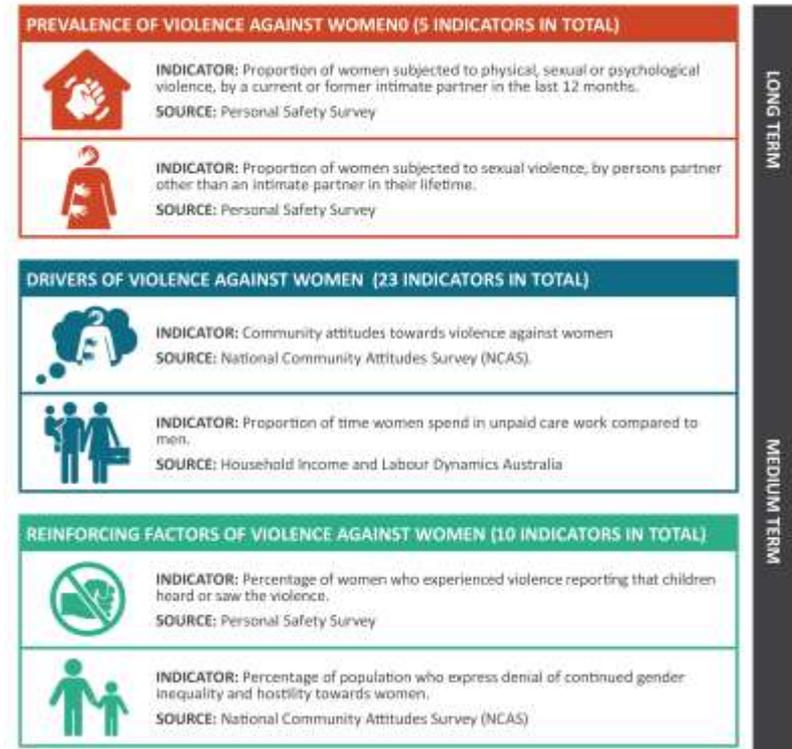

PROCESS MEASURES ▶
 What is being done to support change?

Methodology - part 1: medium and long-term measures

Desktop analysis of select indicators from existing population-level quantitative datasets that assess trends over time

11 Domains
39 Indicators

Methodology - part 2: prevention infrastructure

- Measures progress towards the prevention infrastructure required to provide the foundations for sustained and meaningful population-level change
- Exploratory, qualitative approach, using mixed methodologies (case studies, survey, interviews, policy analysis, analysis of existing evaluations, some analysis of secondary data). Designed to establish a baseline and set the foundations for future monitoring
- 6 domains; approximately 30 indicators

PREVENTION INFRASTRUCTURE AND PROGRAMS (43 SUGGESTED MEASURES)	
	POSSIBLE MEASURE: An increasing number of university/TAFE courses include preservice qualification standards and competencies on prevention.
	POSSIBLE MEASURE: Governments (federal, state/territory, and local) have a dedicated policy for primary prevention, aligned with <i>Change the story</i> .

What are we learning?

Report not be public until June 2020, so findings not finalised yet.

Medium and long term measures - picture likely to be mixed. Range of publicly available datasets indicate positive shifts on some measures, for example in attitudes (see National Community Attitudes Survey). But on other measures, change has not yet been observed.

However we're still working to bring all the indicators and measures together, and analyse these as a whole, together with the qualitative information we're collecting on the infrastructure measures, in order to create a full picture,

The ability to conduct this kind of holistic, multi-dimensional analysis across all these domains, is what makes the project unique and valuable,

Infrastructure measures: emerging lessons

- Infrastructure develops in different ways in different contexts and is not necessarily linear or predictable
- Analysis of this process will highlight:
 - where mutually reinforcing work is required
 - where there are dependencies between and across the different infrastructure domains
 - dependencies between the infrastructure domains and the drivers
- Mechanisms for data collection and monitoring are part of the infrastructure needed, so work to develop these, as we are doing in this project - is also contributing to building the infrastructure

Challenges

- Limitations of population level data:
 - Lack of data for every indicator
 - Doesn't enable nuanced understanding of results for population sub-groups

Strengths of the approach

- Multi-dimensional analysis demonstrates scale and diversity of effort required to prevent violence against women
- Helps identify gaps in population level strategy
- Advocacy tool
- Accountability
- Blueprint for measuring complex social and political phenomena

Possible implications for other countries

- Globally, this is one of the few initiatives to build evidence on primary prevention progress at a national population level. Our Watch is keen to keep sharing the lessons we're learning
- Demonstrates importance and value of monitoring and provides a general approach that could be used elsewhere. But we acknowledge the detail of approaches in different country contexts would need to be quite different
- In less resourced contexts where there is little available population level data, options could include:
 - starting with an assessment of prevention infrastructure (including research and data infrastructure)
 - drawing on available administrative data, or data being collected for SDG monitoring.

Thank you
