

Is there an association between clean cooking and IPV?

Variable	IPV Unadjusted OR (95% CI) Bivariate analyses	P Value	IPV Adjusted OR (95% CI) Adjusting for relative employment	P Value	IPV Adjusted OR (95% CI) Without adjusting for relative employment	P Value
Clean cookstove and pellet users						
No	ref		ref		ref	
Yes	0.75 (0.55-1.03)	0.073*	0.71 (0.52-0.97)	0.034**	0.73 (0.53-1.00)	0.048**

Supports stress H₀ of IPV: “A + B + C → X where stressors (A), resources with which to meet the stressors (B), and the individual's interpretation of the situation (C) combine to yield a crisis (X)”- Fox et al., (2002)
