

Interventions addressing men, masculinities & gender equality in SRHR: An evidence and gap map and systematic review of reviews: Dr Eimear Ruane-McAteer, Dr Avni Amin

Main Findings

1. Majority of reviews engaging men & boys in SRHR programmes are **NOT gender transformative (GT)**
2. Interventions addressing **VAWG** are almost **equally likely to be GT than not.**
3. The **majority of GT** intervention reviews covered **VAWG outcomes**

ABSTRACT

Objectives Working with men/boys, in addition to women/girls, through gender-transformative programming that challenges gender inequalities is recognised as important for improving sexual and reproductive health and rights (SRHR) for all. The aim of this paper was to generate an interactive evidence and gap map (EGM) of the total review evidence on interventions engaging men/boys across the full range of WHO SRHR outcomes and report a systematic review of the quantity, quality and effect of gender-

Key questions

What is already known?

► Engagement of men/boys alongside women in gender-transformative programming is fundamental to addressing gender inequality and sexual and reproductive health and rights (SRHR) for all.

What are the new findings?

► The paper offers the first interactive evidence and
